PREFACE

This publication was prepared by the Labor Market Information Section of the Colorado Department of Labor and Employment, in cooperation with the Employment and Training Administration, U.S. Department of Labor. It is published annually and is designed to provide historical, current, and projected labor market information for Colorado and various regions within the State. For the reader's convenience, the report is divided into sections based on subject matter and geographical location. The first section contains narrative, graphs, and tables on major industry employment in Colorado. The second section focuses on particular occupations and occupational groups. Section three contains general demographic information, including personal income data, labor force and population by race/ethnicity, and the poverty population. Section four contains data from the Department of Labor's Employment Service. Following section four are eleven separate sections, each of which contains labor market information on a particular geographic area of the State. Ten of the areas coincide with Service Delivery Areas under the Job Training Partnership Act.

Comments, suggestions, and questions regarding content and format are invited and may be addressed to:

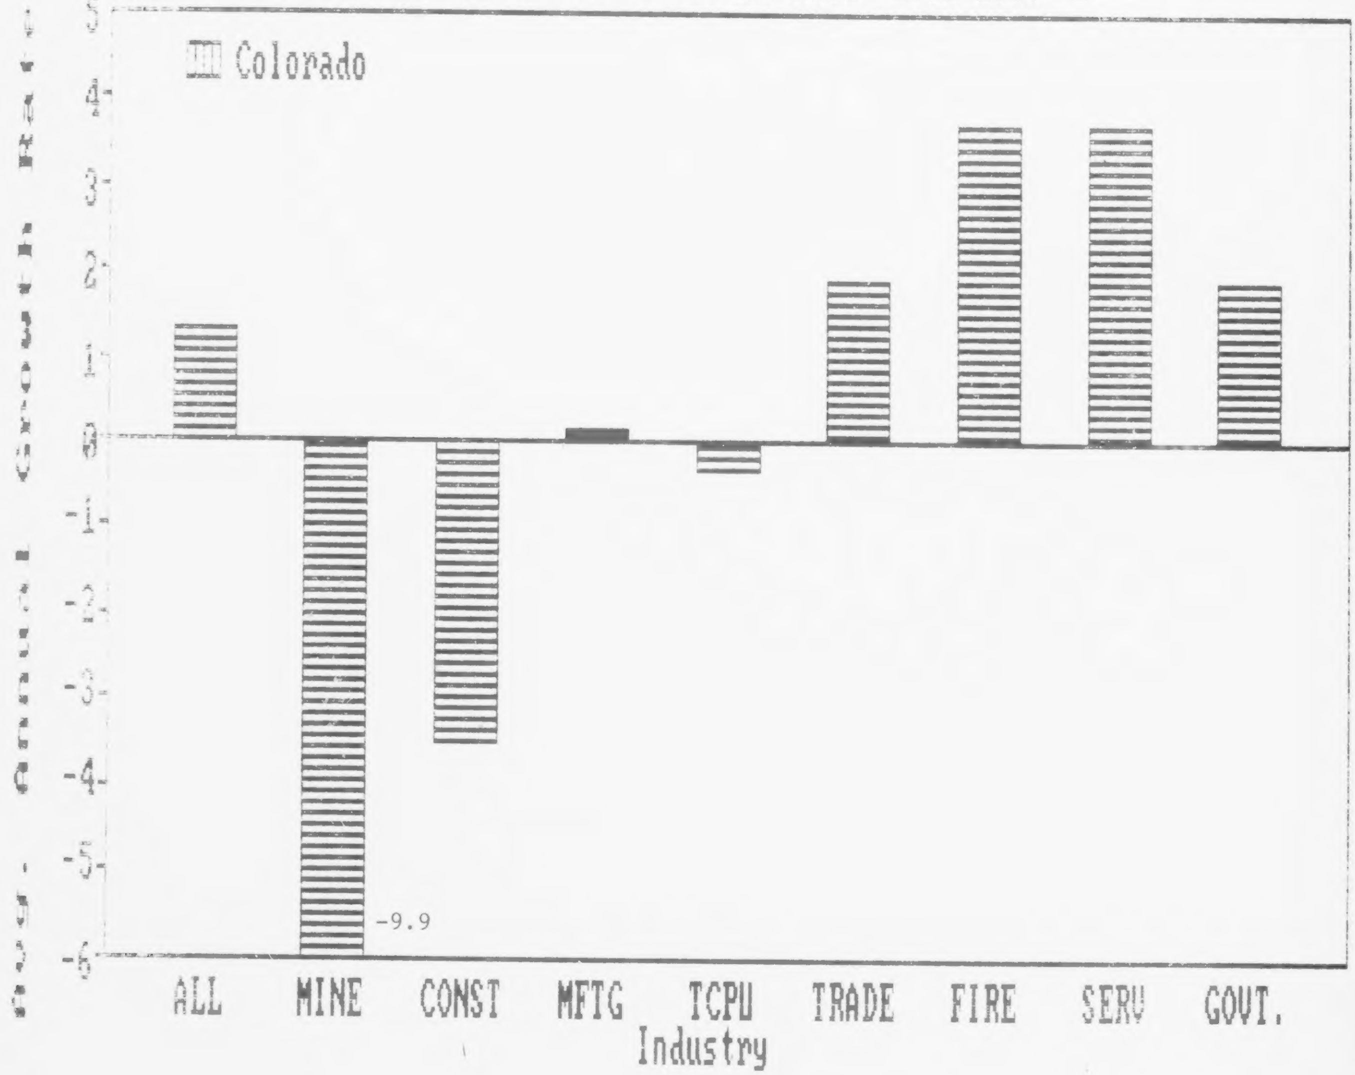
COLORADO AND THE UNITED STATES

This section contains narrative, graphs and tables on employment by major industry division in Colorado and the United States.



AVG. ANN. EMPLOYMENT GROWTH RATE 1982-1987

Source: Current Employment Statistics Series

Colorado Industry Employment Outlook

Summary of National Economic Activity

The nation experienced relatively strong economic activity in (federal) fiscal year 1987. As measured by gross national product (GNP), the nation's economy grew by 3.1 percent in fiscal 1987, compared with 2.6 percent on fiscal 1986. The major elements of GNP contributed disproportionately to the increase, as personal consumption expenditures and government spending made up only 45 percent of the growth in GNP even though these two categories comprise an 86 percent static share of GNP. Conversely, private domestic investment and net exports contributed a disproportionately large share to the growth in GNP. Despite a continuing perception of a growing trade deficit, United States exports exceeded imports by $27 billion in constant dollar terms in fiscal year 1987.

Several worrisome trends were apparent in fiscal year 1987. As mentioned above, government and consumer spending grew quite slowly. This was a reflection a tight fiscal policy at all levels of government and slow income growth and declining debt levels for consumers. Disposable personal income increased by only 0.7 percent in fiscal 1987, a development that will almost certainly affect discretionary purchases by consumers in fiscal 1988. Employment growth was also sluggish in fiscal 1987, as only about 2 million jobs were added between the third quarters of 1986 and 1987. However, the labor market showed considerable strength in the fourth quarter of 1987, particularly in manufacturing sectors. This contributed to a decline in the nation's unemployment rate to 5.8 percent in December 1987.

Monetary policy shifted from accommodative in 1986 to nearly restrictive in 1987. Growth in the broad money measure M2 was actually below the target range that the Federal Open Market Committee had agreed upon in February 1987.1/ The curtailment of inflationary pressures was the primary emphasis of monetary policy in 1987, with accommodation of economic growth a secondary consideration.

The Consumer Price Index increased by 4.4 percent nationally in 1987. This was nearly four times the increase in 1986. Much of the increase can be attributed to increases in import and energy prices.

The dollar continued to decline relative to the currencies of many of our major trading partners in fiscal 1987. This led to a genuine improvement in the trade picture as net exports were approximately $27 billion in fiscal 1987. Prices of imports have increased twice as fast as prices of domestically-produced goods in fiscal 1987. However, foreign manufacturers have not allowed the increase in the value of their currencies to be fully reflected in price increases for their products. This fact demonstrates the determination of foreign producers to maintain their share of the U.S. market.

Outlook for Fiscal Year 1988

The assumptions upon which our employment growth projections are based are outlined below.

Personal income will exhibit a relatively slow rate of growth in fiscal year 1988. When combined with a very slow rate of growth in consumer debt, the result will be a very small (about 1 percent) rise in consumption expenditures in fiscal 1988. Consumption spending will be buoyed by declining personal income tax liability and a small decline in real interest rates.

Government fiscal policy will remain tight, as all levels of government struggle with declining revenue growth. Government purchases of goods and services is expected to grow by about 1.5 percent. It is expected that the federal budget deficit will increase by approximately $15 billion to $30 billion dollars in fiscal year 1988.

The Federal Reserve established a target range for money supply growth in 1988 that was slightly lower than the 1987 range. It is expected that the Federal Reserve will follow an "acquiescent" monetary policy in fiscal 1988, allowing credit markets to determine interest rates and avoiding activism (e.g. lowering the discount rate charged to member banks) as much as possible.

Increasing export demand, rising profits, and a shortage of plant capacity in some industries should lead to relatively strong investment in plant and equipment by businesses in fiscal 1988. A recent survey by the U.S. Commerce Department indicated that business plans to increase capital spending by 7.3 percent in real terms in 1988.[2/] Our assumption is that the increase will be between 4 and 5 percent. As in fiscal 1987, investment spending will probably carry more than its share of GNP growth. The capital spending picture should also be helped by an expected decrease in real interest rates.

With the value of the dollar remaining at low levels relative to other major currencies, American producers will slowly gain a larger share of the domestic and export markets in fiscal 1988. If the relative value remains near current levels, the U.S. merchandise trade deficit should be reduced by about $25 billion in fiscal year 1988.

Major uncertainties in the assumptions outlined above are: 1) The course of monetary policy. If the Federal Reserve follows a restrictive monetary policy, interest rates will rise, affecting consumption, investment, and the value of the dollar. The effect on GNP would be negative. 2) The rate of increase (or decrease) in consumer spending. An actual decline in real consumer spending would force business to revise investment schedules downward and would probably lead to a recession. 3) The unknown impact of the decline in the value of stock portfolios on investment and purchasing decisions. Peaks in the Commerce Department's stock price index have been reliable indicators of peaks in aggregate economic activity in the past three decades.3/

It appears likely that the nation's economy will enter a recession sometime in the next eighteen months. Disposable income has been growing very slowly in the past year, and real wages have actually been declining. The result will probably be extremely slow or declining consumer spending. As business perceives a drop in final demand, investment schedules will be pared and production will be cut. Another factor that will contribute to the downturn will be a restrictive fiscal policy that allows for very little real growth in government spending.

However, if there is one thing that is certain about business cycles, it is that they are aperiodic, and a deterministic mathematical model that will consistently predict their peaks and troughs has not yet been discovered. And although it is possible to make qualitative statements on the links between the Colorado and national economies, truly quantitative links are elusive. As always, the further out in time a forecast is, the less reliable it is. Users of these forecasts should be aware of these caveats.

The following is a brief outline of the salient factors that were considered in forecasting employment change in the major industry divisions.

The Mining Division

Employment in the mining division continued to decline in calendar year 1987. Overall, 6100 wage and salary jobs were lost in the division in 1987. All industry groups within the division experienced losses, but oil and gas extraction was hit hardest, with a loss of 5100 jobs.*

Although prices for oil and gas rose significantly in 1987, the increases did not lead to any significant number of hires. Oil and gas producers concentrated on reducing operating expenses and improving cash flow, and thus were reluctant to add employees.

Coal producers as a group continued to experience slack demand and declining prices. The majority of coal is used as an input for electricity generation. Population is expected to increase very slowly in Colorado and most of the Rocky Mountain Region in the next two years. Thus it is unlikely that the demand for coal will increase significantly in the next two years.

Employment in the mining division is expected to decline by between 4 and 5 percent in fiscal year 1988. A slight gain (about 300 jobs) is expected in fiscal 1989, contingent mostly upon an increase in oil prices.

The Construction Division

Employment in the construction division declined by 7800 jobs between 1986 and 1987. Since the peak employment level of about 90,000 jobs in 1984, the division has declined by 24 percent. Since mid-1985, slow income growth and excess capacity of commercial and residential property has sharply reduced new construction.

Another small decline in construction employment is expected in fiscal year 1988. Although slow population growth will constrain residential building for the next two years, overall employment in the division should register a slight increase in fiscal 1989, boosted by initial construction on the new Denver convention center and other public works projects.

The Manufacturing Division

The manufacturing division experienced a loss of 1,100 wage and salary jobs in 1987. However, manufacturing employment was trending upward at the end of 1987. The division gained 600 jobs between the third and fourth quarters of 1987. This reflected a national trend of strong manufacturing job growth at the end of 1987.

An increase in exported manufactured goods was the primary factor that led to rising manufacturing employment in the past year, Net exports accounted for 23 percent of GNP growth in fiscal year 1987. Profits of manufacturing firms were also up considerably late in 1987.

Stimulated by rising export oppurtunities and rising defense spending in the state, the manufacturing division is expected to add approximately 2,600 jobs in fiscal year 1988, followed by a 2,000 job increase in fiscal 1989.

The Transportation, Communications, and Public Utilities (T,C,PU) Division

Employment in the T,C,PU division declined by 3700 jobs in 1987. This marked the first decline in this industry division since 1983.

Growth in transportation, communications, and public utilities is highly dependent on population growth and output growth in goods-producing industries. Growth in trucking has been restrained by declining output in the construction and manufacturing industries. Consumption of electric, gas, and sanitary services has been relatively flat due to slow population growth. Population growth is expected to continue its slow pace in the coming year.

In fiscal years 1988 and 1989, growth in manufacturing output, increasing air traffic, and small increases in the communications group should help the T,C,P.U. division add approximately 2,700 jobs.

The Trade Division

Trade registered a slight 0.4 percent increase in employment in 1987. The increase represented 1,300 jobs. The unusual and sharp decline of 3,200 trade jobs in 1986 represented a market adapting itself to a situation of oversupply. The rebound in 1987, however slight, is a sign that the industry has reached a point of relative stability.

In fiscal 1988, slow growth in population and disposable income, combined with slow growth in consumer debt, should keep employment growth in trade to well below its average rate for the past five years. The division as a whole is expected to add less than 10,000 jobs statewide over the next two years.

The Finance, Insurance, and Real Estate (FIRE) Division

Employment in the division increased by 1,200 jobs from 1986 to 1987. The FIRE division was one of the few industrial divisions to show a gain in 1987. However, the gain was well below the 3,000 average annual job increase in the past five years.

The banking industry group has been restructuring in the face of acute competition for deposits and slack loan demand. Employment in the insurance group has been negatively affected by slow population growth. The real estate group has suffered due to minimal activity in the markets for residential and commercial space.

Employment growth in fiscal 1988 is expected to occur at a rate similar to the the 1987 rate, with most of the increases occuring in insurance and credit agencies other than banks.

The Services Division

Employment in this industrial division increased by 6,800 in 1987. Industry groups with large gains were business services (+3000), health services (+4100), and private hospitals (+2100). Services added more jobs than any other major industry division in 1987.

The services division contains a very broad range of industry groups. Thus it can be affected by a wide variety of economic and demographic factors, such as a changing industrial structure, the age composition of the population, or changing consumer preferences. The growing tendency for business to contract out various functions has led to rapid employment increases in business services. The gradual aging of the population and increasing concern with personal health has led to increases in health services and hospitals. These trends are expected to continue into the next century.

The services division is expected to add approximately 8000 jobs in fiscal year 1988.

The Public Administration Division

Slow population growth and tight government fiscal policies should hold growth in public administration to less than 1 percent a year for the next two years.

NOTE: There are three major conceptual differences between estimates in the above table and estimates on the previous page. The above table contains elements of employment not covered by unemployment insurance. It is done on a calendar year rather than a fiscal year basis. Finally, government employment is shown separately rather than being combined with similar private sector employment.

SECTION II

OCCUPATIONAL INFORMATION

COLORADO AND THE UNITED STATES

This section contains a small sample of the occupational information resources that are available from the Labor Market Information Section. Additional information can be obtained by calling 620-4552 or 620-4555.

LABOR MARKET DEVELOPMENTS

The upcoming five-year period is expected to be better than the last in terms of Colorado job growth. From 1988 to 1993, an additional 147,000 workers should be added to State employment rolls, compared to only a 96,000 upturn for the period 1983 to 1988. Despite the forecast improvement, the upcoming five years are not expected to be nearly as dynamic as the 1970's and early '80's were for Colorado. During the period 1975 to 1980, over 300,000 new jobs were created in the State.

Industrial Composition

The trade and service industries are expected to generate over half the new job opportunities between 1988 and 1993. The goods-producing sectors of mining, construction, and manufacturing, on the other hand, together will account for only about 20 percent of the growth.

Going back to 1950, service-producing industries have always made up the lion's share of total nonagricultural wage and salary employment in both Colorado and the nation. Service-producing industries are defined to be transportation, communications, and public utilities; trade; finance, insurance, and real estate; services; and government. The share of employment attributable to these service-producing areas has also been expanding over the years. Between 1950 and 1982, goods-producing industries across the nation gained jobs at an average rate of .9 percent a year. During the same period, service-producing industries grew by 4.6 percent annually.

The industrial mix of nonagricultural wage and salary workers in Colorado has been somewhat different than the nation's in that historically there has been an even higher concentration of employment in the service-producing area. In 1950, the ratio of service to goods-producing jobs in the State was 2.8 to 1.0 - twice the national concentration. By 1982, the ratio in Colorado had increased to 3.3 to 1.0, while the nation had climbed to 2.7 to 1.0.

Occupational Outlook

The changing structure of industrial employment will significantly impact the occupational, economic, and social makeup of our society. The declining proportion of jobs in the goods-producing sectors will result in a generally decreasing demand for blue-collar occupations, although growth is still anticipated in that area. During the next five years, blue-collar jobs are expected to expand by 7.8 percent in Colorado. Sales and professional-technical positions, however, are expected to grow by 12.3 and 11.5 percent respectively.

The single occupation that will add the most jobs to the State's economy is retail salesperson. This group will gain over 1200 new workers during each of the next five years to reach a total employment level of nearly 54,000 by 1993. This is also the fastest-growing occupation in the nation, as nearly 86,000 salespersons are expected to be added each year until 2000.

The changing age structure of the population both nationally and in

Colorado will also have an effect on occupational growth patterns in upcoming years. Between 1960 and 1970, the population 65 years old and over grew by nearly 19 percent. During the decade of the '70's, this growth rate increased to almost 32 percent, and it is expected that these increases will be maintained into the 1990's. This aging of the population will stimulate significant growth in jobs related to health care, geriatric social work, public housing, and mass transportation. In fact, national forecasts indicate that 12 of the 20 fastest-growing occupations to the year 2000 will be in the health services area. This includes medical assistants (growing by 90 percent between 1986 and 2000), physical therapists (up 87 percent), and home health aides (up 80 percent).

As the children of the World War II baby boomers work their way through the educational system, teaching occupations are experiencing a resurgence. The need for significant numbers of kindergarten and elementary-school teachers in upcoming years is being forecast at both the State and national levels.

Importance of Education

The educational level of the adult labor force (25 to 64 years old) is continuing to rise; this is very evident in the increase in the proportion of workers - particularly women - with four years or more of college. One out of four members of the labor force now has a college degree, and women represent 40 percent of college-educated workers.

Occupations in which a large proportion of workers have college training are among the fastest-growing, and occupations in which a large proportion of workers have fewer than four years of high school are generally among the slowest-growing. College graduates are heavily concentrated in managerial and professional-specialty occupations. Three out of four professional-specialty workers, and almost half of all executives, administrators, and managers are college graduates.

Education is a key determinant of labor market success in other ways. Workers with more education earn more and are less likely to be unemployed. Earnings of job holders with four or more years of college averaged over $33,400 in 1986, while the earnings for those with four years of high school were below $20,000 and, for those with less than four years of high school, $16,000.

A national study showed that in March 1987, the lowest rates of unemployment were recorded by college graduates. The unemployment rate for college graduates 25 to 64 years of age was 2.5 percent, compared with 4.5 percent for those with one to three years of college, 6.3 percent for high school graduates, and 11.1 percent for high school dropouts.

It is expected that education will become more important in the future, rather than less. Advances in technology will require that workers receive additional training to compete for just entry-level jobs.

ANNUAL GROWTH BY OCCUPATION

COLORADO
(1988-1993)

SECTION III

GENERAL DEMOGRAPHIC INFORMATION

COLORADO AND THE UNITED STATES

This section contains tables and graphs on Colorado's labor force and population, as well as personal income data and estimates of the number of persons below the poverty line. Many of the estimates are presented by race and ethnicity.

AREA: State of Colorado

Estimated Labor Market Data Summary
Fiscal Years* '87, '88, '89, '90

	Fiscal '87	Fiscal '88	Fiscal '89	Fiscal '90
1. Total Population (Annual Average)	3288000	3344000	3387000	3422000
16 Years Old and Over	2440000	2484000	2516000	2545000
2. Labor Force (Annual Average)	1713000	1719000	1741000	1766000
Employment	1578000	1612000	1642000	1678000
Unemployment	135000	107000	99000	88000
Unemployment Rate	7.9	6.2	5.7	5.0
3. Participation Rate (%)				
Total Population	52.1	51.4	51.4	51.6
Population 16 Years Old and Over	70.2	69.2	69.2	69.4

SECTION IV

EMPLOYMENT SERVICE DATA

COLORADO

This section contains operations data from Colorado's Job Service Centers. Job Service applicants are presented by occupational group and race-ethnicity as well as other characteristics. An analysis of various services for the past two years is also presented, as well as operations goals for the current program year. Job Service applicant data for specific regions of the State is included in each of the specific geographic sections.

APPENDICES

A Note on the Data

The "Major Industry Division Forecasts" table for Colorado and each Service Delivery Area is based on the ES-202 data series, which is compiled by the Colorado Department of Labor and Employment based on unemployment insurance tax reports filed by employers in Colorado. The ES-202 series represents only those employees who are covered by unemployment insurance. Major categories of employment not covered by unemployment insurance are self-employed, railroad, unpaid family workers, domestic workers, and a large portion of agriculture. Employment figures in the tables entitled "Labor Market Data Summary" represent estimates of total employment as opposed to covered employment. Also, the table on page 13 presents estimates of those categories not covered by unemployment insurance.

With the exception of the table presented on page 13, all industrial analyses allocate government employees to those private sector industries where comparable economic activity is taking place. For example, public sector education is allocated to the major division of services. Public administration employment, since it has no private sector counterpart, is left to stand on its own, except on page 13, where it is included in the Government division.

The "Colorado Industry Employment Outlook" narrative and the "Labor Market Developments" narrative were written by different staff economists. Therefore, minor differences of opinion may be reflected in each of these presentations.

METHODOLOGY FOR THE ESTIMATION OF YOUTH POPULATION AND LABOR FORCE BY COUNTY - FY 1988

1) Population:

Using 1980 Census data, a proportion of youth (age 16-21) population to total population is calculated for each county. This age group is expected to decline by .28 percentage points each year throughout the 1980's. We multiply .28 times 7.7 to arrive at an estimate of the percentage change in the age 16-21 proportion from 1980 to fiscal year 1987. The percentage point decline is subtracted from the original 1980 Census proportion of youth population to total population. This proportion is then applied to our current estimate of total population to arrive at an estimate of youth population.

2) Labor Force

Youth labor force participation rates by county are calculated using 1980 Census data. We want to bring these rates up to date by using a moving series of national data on youth employment. Form 1980 to 1984, the national youth participation rate fell from 63.6% to 60.8%. Thus, the 1984 rate was 95.6 percent of the 1980 rate. Thus, a factor of .956 is applied to each county's youth labor force participation rate to arrive at a current estimate of the youth participation. The rate is then applied to the estimate of youth population to arrive at an estimate of youth labor force.

3) Employed to labor force ratios by county are calculated using 1980 Census data. These ratios are each divided by the same ratio for the state. The resulting factors are then divided by the ratio:

$$\frac{\text{1980 national 16-21 employed/labor force}}{\text{1980 national total employed/labor force}}$$

The factors that result from the above calculations are multiplied times the current estimated state total employed/labor force ratio (from the table "Labor Market Data Summary, State of Colorado"). This results in current estimates of youth employment rates (employed divided by labor force) by county. These rates are then applied to estimates of youth labor force to arrive at estimates of employed youth.

4) Unemployed

Estimates of employed are subtracted from estimates of labor force, resulting in the estimated number of unemployed.

5) Unemployment Rate

Estimates of unemployed are divided by estimates of labor force and multiplied by 100, resulting in an unemployment rate.

6) Disadvantaged Youth Population

We begin by calculating the proportion of the total poverty population that the 16-21 age group comprised in 1980 (on a county basis). We benchmark these ratios with the same type of ratio for the United States in 1980. The resulting ratio is multiplied times the most current (in this case, 1983) national proportion of youth in poverty to total persons in poverty. This gives us our current estimate of youth poverty to total poverty. The current ratio is applied to a current estimate of total persons in poverty to arrive at a preliminary estimate of disadvantaged youth.

Next, another adjustment is made to reflect the reduction of the proportion of total youth to total population (see #1 above). To adjust the disadvantaged youth figure accordingly, we use a factor that reflects the change in the total youth proportion from the previous year.

7) Unemployed Disadvantaged Youth

We begin by calculating the ratio:

$$\frac{\text{National age 16-21 disadvantaged unemployed}}{\text{National age 16-21 total unemployed}}$$

The result is in turn divided by the ratio:

$$\frac{\text{National age 16-21 disadvantaged population}}{\text{National age 16-21 total population}}$$

The resulting factor is used to adjust our county ratios of disadvantaged youth population to total youth population. This adjusted ratio is then applied to the total youth unemployed estimate by county to arrive at an estimate of disadvantaged unemployed.

Eligible Labor Surplus Areas for Bidding on Federal Contracts*

Background

Employers located in labor surplus areas, as classified by the Department of Labor, may be given preference in bidding on Federal procurement contracts. The purpose in providing such preference is to help direct the government's procurement dollars into areas where people are in the most severe economic need, i.e., areas with the highest rates of unemployment.

The concept of channeling Federal procurement contracts into high unemployment areas dates back to the early 1950's. At that time, during the Korean conflict, there was concern among government officials that high unemployment rates and low utilization of plants and equipment in some areas would lead to erosion of the mobilization base and adversely affect the nation's production capability. There was also concern that the cost of constructing new plants and relocating workers would cause an unnecessary drain on the nation's resources.

The Office of Defense Mobilization studied this problem and in February 1952 issued Defense Manpower Policy Number 4 (DMP-4). This policy implemented the idea of directing Federal procurement contracts to employers in labor surplus areas. However, the labor surplus area program was not successful in directing Federal contracts to employers in high unemployment areas, largely because the program lacked a statutory base. This was changed with the enactment on August 4, 1977 of Public Law 95-89. The act provided statutory authority for the labor surplus area program by amending the Small Business Act and authorizing Federal agencies to set-aside contracts to employers who agree to carry out a substantial portion of the contract in a labor surplus area. "Substantial portion" was defined as meaning over 50 percent of the value of the contract.

As a result of the Urban and Regional Policy Group's review of Federal programs in 1977-1978, additional support was given to the labor surplus area program because of its potential for providing assitance to distressed areas. In March 1978, the General Services Administration was directed to work with each Federal agency in setting targets for placing set-aside contracts in labor surplus areas. The General Services Administration was also directed to monitor the performance of the Federal agencies in meeting the agreed-upon targets and to submit a report to the President every six months concerning the progress of each agency in meeting its goals. These directives were later incorporated in Executive Order 12073 which was signed on August 16, 1978.

Public Law 96-392 ("Small Business Administration") was enacted on July 2, 1980 and authorized the labor surplus area program on a permanent basis. Like P.L. 95-89, the act authorized Federal agencies to set-aside contracts when there is a reasonable expectation that offers will be obtained from a sufficient number of firms to ensure that awards are made at reasonable prices. P.L. 96-302 also altered the priority of awards under the small business and labor surplus area programs, and established a new priority category of partial set-asides for small businesses located in labor surplus areas.

Section 1-103 of Executive Order 12073 assigned to the Department of Labor the responsibility for classifying labor surplus areas. This represented a continuation of the Labor Department's classification responsibilities since the inception of the labor surplus area program in the early 1950's under DMP-4. The Labor Department also has responsibility for classifying labor surplus areas under Executive Order 10582 which implements the Buy American Act.

Procedures for Classifying Labor Surplus Areas

Labor Surplus areas are classified on the basis of civil jurisdictions rather than on a metropolitan-area or labor-market-area basis. By classifying labor surplus areas in this way, Federal contracts can be directed to those specific localities with high unemployment rather than to all civil jurisdictions within a metropolitan area, not all of which may suffer from the same degree of unemployment.

Civil jurisdictions are now defined as all cities with a population of at least 25,000 and all counties. Townships of 25,000 or more population are also considered as civil jurisdictions in four states (Michigan, New Jersey, New York, and Pennsylvania). In Connecticut, Massachusetts, Puerto Rico, and Rhode Island where counties have very limited or no government functions, the classifications are done for individual towns.

A civil jurisdiction is classified as a labor surplus area when its average unemployment rate was at least 20 percent above the average unemployment rate for all states (including the District of Columbia and Puerto Rico) during the previous two calendar years. During periods of high national unemployment, the 20-percent ratio is disregarded and an area is classified as a labor surplus area if its unemployment rate during the previous two calendar years was ten percent or more. This ten-percent "ceiling" concept comes into operation whenever the two-year average unemployment rate for all states was 8.3 percent or above (i.e., 8.3 percent times the 1.20 ratio equals 10.0 percent). Similarly, a "floor" concept of 6.0 percent is used during periods of low national unemployment in order for an area to qualify as a labor surplus area. The six-percent "floor" comes into effect whenever the average unemployment rate for all states during the two-year reference period was 5.0 percent or less.

The classification procedures also provide for the designation of labor surplus areas under exceptional-circumstance criteria. These procedures permit the regular classification criteria to be waived when an area experiences a significant increase in unemployment which is not temporary or seasonal and which was not adequately reflected in the data for the two-year reference period. In order for an area to be classified as a labor surplus area under the exceptional-circumstance criteria, the state employment security agency must submit a petition requesting such classification to the Department of Labor's Employment and Training Administration.

The Department of Labor issues the labor surplus area listing on a fiscal-year basis. The listing becomes effective each October 1st and remains in effect through the following September 30th. During the course of the fiscal year, the annual listing is updated on the basis of exceptional-circumstance petitions submitted by the state employment security agencies and approved by the Employment and Training Administration. The reference period used in preparing the new list was January 1985 through December 1986. The national average unemployment rate during this period (including data for Puerto Rico) was 7.2 percent. The new qualifying rate for labor-surplus-area classification is therefore 8.6 percent (7.2 percent times 1.20 equals 8.6 percent). Areas were therefore included on the new annual labor surplus area listing because their average unemployment rate during the reference period was 8.6 percent or above.

Listing of Labor Surplus Areas

Eligible Labor Surplus Areas	Civil Jurisdictions Included
Alamosa County	Alamosa County
Archuleta County	Archuleta County
Chaffee County	Chaffee County
Clear Creek County	Clear Creek County
Conejos County	Conejos County
Costilla County	Costilla County
Custer County	Custer County
Delta County	Delta County
Fremont County	Fremont County
Garfield County	Garfield County
Grand Junction	Grand Junction in Mesa County
Greeley	Greeley in Weld County
Huerfano County	Huerfano County
Lake County	Lake County
Las Animas County	Las Animas County
Balance of Mesa County	Mesa County less Grand Junction
Mineral County	Mineral County
Moffat County	Moffat County
Montezuma County	Montezuma County
Montrose County	Montrose County
Morgan County	Morgan County
Otero County	Otero County
Ouray County	Ouray County
Pueblo	Pueblo in Pueblo County
Balance of Pueblo County	Pueblo County less Pueblo
Rio Grande County	Rio Grande County
Saguache County	Saguache County
San Juan County	San Juan County

COMMONLY-USED TERMS, ACRONYMS, AND ABBREVIATIONS

AFDC - Aid to Families with Dependent Children

All other nonag - nonagricultural self-employed, unpaid, family and domestic workers

Applicants available - all applicants available at end of period plus all new, new partial, and renewal applicants

BLS - Bureau of Labor Statistics

CDET - Colorado Division of Employment and Training

CETA - Comprehensive Employment and Training Act

Civilian labor force - all civilian noninstitutionalized individuals, 16 years of age or older, employed or unemployed, by place of residence

Civilian labor force participation rate - the ratio of the civilian labor force to the civilian noninstitutionalized population. Participation rates are usually published by sex-age groups and often are cross-classified by other demographic characteristics

CPS - Current Population Survey

Continued weeks claimed - the sum of weeks claimed for partial or total unemployment under the unemployment compensation program

Counseling interview - a face-to-face interview in which an employment counselor or employment-counselor trainee (1) helps an applicanr resolve problems of occupational choice or change or job adjustment and (2) obtains and records on the application and/or other appropriate applicant records one or more of the following: (a) a summary statement describing the counseling problem; (b) additional information contributing to a better definition of the problem or its solution; (c) a statement of an occupational plan or recommendation for the solution of the problem; and (d) when pertinent, a statement elicited in the course of follow-up concerning progress in carrying out the counseling plan and any further services needed.

Deregistration - denotes that a WIN registrant is being separated from the program for one of the following reasons: (1) employed after registration, off AFDC; (2) employed volunteer, not off AFDC; (3) applicant not eligible for AFDC; (4) applicant exempt from registration for work; (5) applicant sanctioned (removed for refusal to participate in program without good cause); or (6) applicant off AFDC for non-WIN-related reasons such as death, moving, etc.

DOL/ETA - Department of Labor, Employment and Training Administration

DOT - Dictionary of Occupational Titles

Eligible population - those individuals who are eligible for services under the Job Training Partnership Act, i.e., individuals whose income is below the poverty criterion

Employed - those individuals 16 years old and over who did any work at all during the monthly survey week; includes full-time, part-time, and temporary workers. Individuals are also counted as employed if they have jobs but are temporarily absent from work.

Executive Order - a formal document issued by the President of the United States (or, in Colorado, the Governor) which has the force of law. Executive Orders are compiled in Title 3 of the Code of Federal Regulations.

Filled opening - a job opening for which an applicant referred by a local Job Service office has been hired by an employer and has entered the job

HEW - the Department of Health, Education, and Welfare (now split into the the Department of Health and Human Services and the Department of Education)

Individuals placed - initial referrals, hirings, and entrance into jobs by applicants during a fiscal year. These activities together comprise "placement transactions."

Initial claim - an application for a determination of eligibility for benefits which certifies the beginning date (or the continuance into a new benefit year) of a period of unemployment

JTPA - Job Training Partnership Act

Job Development contact - the process of soliciting a public or private employer's order for a special applicant for whom the local office has no suitable opening currently on file

LMA - Labor Market Area

New applicant - a person filing an application card (Form 511A) for whom a local Job Service Center has no previously-prepared application card or whose previous application has become obsolete

Nonagricultural (nonag) wage and salary - refers to nonagricultural-establishment employment

Not in labor force - includes all civilians 16 years old and over who are not classified as employed or unemployed

Obtained employment - employment not meeting the definition of "placement" (see below)

Placement - the hiring by a public or private employer of an individual referred by the employment office for a job or an interview, provided that the employment office has completed all of the following steps: (1) prepared a job order form prior to referral, except in the case of a job development effort on behalf of a specific applicant; (2) made prior arrangements with the employer for the referral of an individual or individuals; (3) referred an individual who had not been specifically designated by the employer, except for referrals on agricultural job orders for a specific crew leader or worker; (4) verified from a reliable source, preferably the employer, that the individual had entered the job; and (5) appropriately recorded the placement.

Referral - the act of determining that an applicant is qualified for a job opening and arranging an interview for the applicant with the employer

Renewal - the transfer of an applicant from the inactive file to active status; that is, he/she is again considered to be available for referral to job openings or employability-development services

SIC - Standard Industrial Classification, published by the Office of Management and Budget, 1972

MSA - Metropolitan Statistical Area

Testing - administering a test (standardized means of measuring an individual's possession of, interest in, or ability to acquire job skills or knowledge) to an applicant

Unemployed - those individuals 16 years of age or older without a job who are available for work and actively seeking work

WIN - Work Incentive Program
